Grain Handling and  
Transportation System**

**Third Quarter**  
**2007-2008 Crop Year**

**2 Data  
Tables**

**Government  
of Canada**    **Gouvernement  
du Canada**

## **Appendix 4: Data Tables**

---

### **PREFACE**

*The material presented in the accompanying tables is drawn from data supplied by the various stakeholders in Canada's Grain Handling and Transportation System. These include the Canadian Wheat Board, the Canadian Grain Commission, the Canadian Ports Clearance Association, Statistics Canada, various grain companies, and individual railway companies. The majority of this data is of a secondary nature and reflects the internal data collection practices as well as informational needs of the individual stakeholders. Moreover, the data also comes in a variety of mediums, structures and levels of detail that require considerable transformation and manipulation in order to be rendered usable.*

*With this in mind, the reader is cautioned regarding the limitations that must be taken into account when considering the material presented. Firstly, although every reasonable effort has been made to ensure that the data used accurately reflects the activity being reported upon, it is largely drawn from un-audited sources. As such, errors in the data collected – whether by way of inclusion or omission – will also be reflected in the statistics presented. As a result, periodic corrections may result in the restatement of previously calculated measurement values. Where such differences arise, the values presented here should be considered to supersede those found in earlier reports.*

*Secondly, the point in time at which individual stakeholders collect data often differs, and generally makes exact matches in any direct comparison impossible. These differences, however, do not detract from the relative comparisons and general observations that may be drawn from the statistics.*

*Thirdly, inconsistent or incomplete reporting makes some estimation necessary. Where such estimations are made, an accompanying footnote will generally detail the specific nature of the approximation.*

*Finally, not all of the data requested of stakeholders has been made available to the Monitor. As a result, the Monitor is unable to calculate or present a number of the measures originally contemplated under the Grain Monitoring Program.*

*Special mention must also be made of the fact that several new measures relating to the movement of "special crops," such as peas, were added in the 2006-07 crop year. Accordingly, the reader is reminded that a number of additional tables now appear alongside those of longer standing, and that this has resulted in their partial re-sequencing.*

### **QUORUM CORPORATION**

Edmonton, Alberta

---

## 1. Industry Overview

---

### 1A Production/Supply

- 1A-1 Western Canadian Crop Production for Major Grains (thousands of tonnes)
- 1A-2 Western Canadian Carry Forward Stock at July 31 for Major Grain on Farm and in Primary Elevators (thousands of tonnes)
- 1A-3 Western Canadian Crop Production for Special Crops (thousands of tonnes)

### 1B Rail Traffic

- 1B-1 Western Canadian Railway Grain Volumes (thousands of tonnes) - Summarized by Destination Port and Origin Province
- 1B-2 Western Canadian Railway Grain Volumes (thousands of tonnes) - Summarized by Destination Port and Primary Commodities
- 1B-3 Western Canadian Railway Grain Volumes (thousands of tonnes) - Detailed Breakdown of Primary Commodities by Destination Port and Origin Province
- 1B-4 Western Canadian Railway Grain Volumes (thousands of tonnes) - Detailed Breakdown of Special Crop Movements by Destination Port

### 1C Country Elevator Infrastructure

- 1C-1 Western Canadian Primary and Process Grain Elevators - Summarized by Province
- 1C-2 Western Canadian Primary and Process Grain Elevators - Summarized by Railway Class
- 1C-3 Western Canadian Primary and Process Grain Elevators - Summarized by Principal Grain Company
- 1C-4 Western Canadian Primary and Process Grain Elevators Capable of Multiple-Car Block Incentive Loading - Summarized by Province
- 1C-5 Western Canadian Primary and Process Grain Elevators Capable of Multiple-Car Block Incentive Loading - Summarized by Railway Class
- 1C-6 Western Canadian Primary and Process Grain Elevators Capable of Multiple-Car Block Incentive Loading - Summarized by Railway Line Classification
- 1C-7 Western Canadian Primary and Process Grain Elevator Openings - Summarized by Province and Facility Class
- 1C-8 Western Canadian Primary and Process Grain Elevator Openings - Summarized by Railway Class
- 1C-9 Western Canadian Primary and Process Grain Elevator Openings - Summarized by Railway Line Classification
- 1C-10 Western Canadian Primary and Process Grain Elevator Closures - Summarized by Province and Facility Class
- 1C-11 Western Canadian Primary and Process Grain Elevator Closures - Summarized by Railway Class
- 1C-12 Western Canadian Primary and Process Grain Elevator Closures - Summarized by Railway Line Classification
- 1C-13 Number of Locations Accounting for 80% of Producer Deliveries

### 1D Railway Infrastructure

- 1D-1 Western Canadian Railway Infrastructure (Route-Miles) - Summarized by Province and Railway Class
- 1D-2 Western Canadian Railway Grain Volumes Moving in Covered Hopper Cars (thousands of tonnes) - Summarized by Railway Line Classification
- 1D-3 Western Canadian Class 3 Railway Summary - Infrastructure and Grain Volumes
- 1D-5 Western Canadian Railway Grain Volumes Moving in Covered Hopper Cars (thousands of tonnes) - Summarized by Railway Class
- 1D-6 Western Canadian Primary and Process Grain Elevators - Summarized by Railway Line Classification

### 1E Terminal Elevator Infrastructure

- 1E-1 Western Canadian Terminal Elevators - Summarized by Port and Facility Class
- 1E-2 Traffic Volume by Port (number of cars)

---

## 2. Commercial Relations

---

### 2A Tendering

- 2A-1 Number of Tenders Called (absolute number and tonnage volume) by Grain
- 2A-2 Number of Tenders Called (absolute number and tonnage volume) by Grain and Grade

## MEASUREMENT TABLES INDEX

---

2A-3	Number of Bids (absolute number and tonnage volume) by Grain
2A-4	Number of Bids (absolute number and tonnage volume) by Grain and Grade
2A-5	Volume of Grain Moved by the Tendering Process (tonnes and %) Relative to the Total Volume of CWB Grains Moved to the Four Eligible Ports (CY 2004-05 to 2006-07)
2A-5(2)	Volume of Grain Moved by the Tendering Process (tonnes and %) Relative to the Total Volume of CWB Grains Moved to the Four Eligible Ports (CY 2000-01 to 2003-04)
2A-6	Volume of Grain Moved by the Tendering Process to the Four Eligible Ports, by Grade (number of contracts and tonnes) (CY 2006-07 by Quarter)
2A-6(2)	Volume of Grain Moved by the Tendering Process to the Four Eligible Ports, by Grade (number of contracts and tonnes) (CY 2000-01 to 2005-06)
2A-7	Breakdown of the Tendered Volumes Not Filled by Category (CY 2006-07 by Quarter)
2A-7(2)	Breakdown of the Tendered Volumes Not Filled by Category (CY 2000-01 to 2005-06)
2A-8	Number of Tenders and Tonnage not Awarded to Lowest Bidder (CY 2006-07 by Quarter)
2A-8(2)	Number of Tenders and Tonnage not Awarded to Lowest Bidder (CY 2000-01 to 2005-06)
2A-9	Percentage of Tendered Grain Moved to FOB (at spout) Sales vs. In-Store Sales
2A-10	Distribution of Tendered Tonnage by Port (CY 2006-07 by Quarter)
2A-10(2)	Distribution of Tendered Tonnage by Port (CY 2000-01 to 2005-06)
2A-11	Railway Distribution of Tendered Tonnage Moved
2A-12	Distribution of Tendered Grain by Size of Car Block (CY 2006-07 by Quarter)
2A-12(2)	Distribution of Tendered Grain by Size of Car Block (CY 2000-01 to 2005-06)
2A-13	Number and Type of Penalties Applied to Tendered Grain Shipments
2A-14	Distribution of Tendered Origins by Province and Elevator Classification
2A-15	Distribution of Tendered Tonnage by Month
2A-16	Distribution of Delivery Points (number) – Tender Contracts (CY 2006-07 by Quarter)
2A-16(2)	Distribution of Delivery Points (number) – Tender Contracts (CY 2000-01 to 2005-06)
2A-17	Average Tendered Multiple-Car Block Size (carloads) - Port
2A-18	Western Canadian Railway Car Cycles – CWB Tendered & Non-Tendered, Summarized by Destination Corridor
2A-19	Count and Range of Accepted Bids by Port and Grain (\$ per tonne) (CY 2006-07 by Quarter)
2A-19	Count and Range of Accepted Bids by Port and Grain (\$ per tonne) (CY 2000-01 to 2005-06)
2A-20	Market Share (tonnage volume and percentage) by Grain (CY 2006-07 by Quarter)
2A-20	Market Share (tonnage volume and percentage) by Grain (CY 2000-01 to 2005-06)
<b>2B</b>	<b>Advance Car Awards</b>
2B-1	Advance Award Movements Tonnes and Percentage – Proportion of Total CWB Movements
2B-2	Distribution of Advance Award Movements – Port
2B-3	Distribution of Advance Award Movements – Railway
2B-4	Distribution of Advance Award Movements – Province / Elevator Class
2B-5	Distribution of Advance Award Movements – Month
2B-6	Distribution of Advance Award Movements – Multiple-Car Blocks
2B-7	Railway Car Cycle (days) – Advance Award Grain
2B-8	Average Advance Award Multiple-Car Block Size (railcars) – Port

---

### 3. System Efficiency

#### 3A Trucking

3A-1	Western Canadian Composite Freight Rates - Short-Haul Trucking (dollars per tonne)
------	--

#### 3B Country Elevator

3B-1	Total Tonnage Throughput (Shipments from Primary Elevators) for Major Grains (thousands of tonnes)
3B-2	Annual Elevator Capacity Turnover Ratio
3B-3	Average Weekly Primary Elevator Stock Levels (thousands of tonnes)
3B-4	Average Days in Store

## MEASUREMENT TABLES INDEX

---

- 3B-5 Average Weekly Stock-to-Shipment Ratios for Major Grains
- 3B-6 Average Handling Charges Based on Posted Rates at Country Delivery Points for Major Grains

### 3C Rail Operations

- 3C-1 Western Canadian Railway Grain Volumes Moving in Covered Hopper Cars (thousands of tonnes) - Summarized by Destination Port and Origin Province
- 3C-2 Western Canadian Railway Grain Volumes Moving in Covered Hopper Cars (thousands of tonnes) - Summarized by Destination Port and Primary Commodities
- 3C-3 Western Canadian Grain Volumes Moving in Covered Hopper Cars (thousands of tonnes) - Detailed Breakdown of Primary Commodities by Destination Port and Origin Province
- 3C-4 Western Canadian Railway Car Cycles (days) - Summarized by Destination Corridor
- 3C-5 Western Canadian Railway Car Cycles - Non-Special Crops
- 3C-6 Western Canadian Railway Car Cycles - Special Crops
- 3C-7 Western Canadian Railway Car Transit and Connection Measures - Summarized by Commodity
- 3C-8 Western Canadian Grain Volumes Moving in Covered Hopper Cars (thousands of tonnes) - Summarized by Car Block Size
- 3C-9 Western Canadian Grain Volumes Moving in Covered Hopper Cars (thousands of tonnes) - Estimate of Incentive Discount Value
- 3C-10 Western Canadian Railway Traffic Density (tonnes per route-mile) - Summarized by Railway Class and Line Classification
- 3C-11 Western Canadian Composite Freight Rates - Rail (dollars per tonne)
- 3C-12 Western Canadian Multiple-Car Shipment Incentives - Rail (dollars per tonne)

### 3D Terminal Elevator and Port Performance

- 3D-1 Annual Port Volume Throughput (Shipments from Terminal Elevators) for Major Grains (thousands of tonnes)
  - 3D-3 Average Weekly Terminal Elevator Stock Levels (thousands of tonnes)
  - 3D-4 Average Days in Store – Operating Season
  - 3D-5 Average Weekly Stock-to-Shipment Ratio for Major Grains by Port
  - 3D-6 Average Weekly Stock-to-Shipment Ratio for Major Grains and Grades by Port
  - 3D-7 Average Vessel Time in Port
  - 3D-8 Distribution of Vessel Time in Port
  - 3D-9 Distribution of Number of Berths per Vessel by Port
  - 3D-11 Average Handling Charges by Port Based on Posted Rates for each Terminal for Major Grains
- 

## 4. Service Reliability

---

### 4A Port Performance

- 4A-1 Average Weekly Stock-to-Vessel Requirement Ratios for Major Grains at Vancouver and Thunder Bay
  - 4A-2 Average Weekly Stock-to-Vessel Requirement Ratios for Major Grains and Grades by Port
  - 4A-3 Average Weekly Stock-to-Shipment Ratios for Board and Non-Board Grains at Vancouver and Thunder Bay
- 

## 5. Producer Impact

### 5B Producer Cars

- 5B-1 Producer Car Loading Sites – Summarized by Province and Railway Class
  - 5B-2 Total Producer Car Shipments – Summarized by Province and Grain
- 

Note: 1.) Data on grain volumes in these tables is presented in Net Tonnes  
2.) Totals may not always add nor percentages match, due to rounding  
3.) Measures new to this years GMP reporting are noted in bold face type

## Western Canadian Crop Production for Major Grains (thousands of tonnes)

## NOTES:

Source: Statistics Canada, *Field Crop Reporting Series - Report # 6*  
Canadian Grain Commission, *Grain Statistics Weekly*

- (1) Farm Stock as reported by Statistics Canada.
- (2) Primary Elevator Stock as reported by Canadian Grain Commission.
- (3) Canadian Grain Commission reporting of pea stocks replaced that for rye stocks as of the beginning of the 2002/03 crop year. July 31, 2003 & 2004 pea carry forward stocks are primary elevator only; rye carry forward stocks are on farm only. Due to relatively small volumes of pea and rye stocks, no adjustments to totals have been made.
- (4) Statistics Canada reporting of pea stocks replaced that for rye stocks as of the beginning of the 2004/05 crop year. July 31, 2005 - present, pea carry forward stocks represent both on farm and in primary elevators.

NOTES:

SOURCE: Canadian National Railway Company, Canadian Pacific Railway Company, and Hudson Bay Railway Company

- (1) Does not include railway grain traffic originating in western Canada and destined to either eastern Canada, the United States of America, or Mexico.
- (2) Comprises all railway grain traffic originating in western Canada and moving to a designated western Canadian port in accordance with the provisions of the Canada Transportation Act. The grain volumes depicted herein include movements made with covered hopper cars, boxcars, trailers, containers or other railway equipment.

NOTES:

SOURCE: Canadian National Railway Company, Canadian Pacific Railway Company, and Hudson Bay Railway Company

- (1) Does not include railway traffic originating in western Canada and destined to either eastern Canada, the United States of America, or Mexico.
- (2) Comprises all railway traffic reported to have originated in western Canada and moved to a designated western Canadian port in accordance with the provisions of the Canada Transportation Act. The volumes depicted herein include movements made with covered hopper cars.
- (3) Comprises all railway traffic reported to have originated in western Canada and moved to a designated western Canadian port in accordance with the provisions of the Canada Transportation Act. The volumes depicted herein include only those movements made with boxcars, trailers, containers or other railway equipment. Owing to railway data limitations, the movement of special crops are not always identifiable, particularly when shipped under the generic term of FAK (Freight All Kinds). Since such movements can not be readily differentiated from other commodities, they can not be included with those presented here. As a result, the values depicted here may be incomplete.

Western Canadian Primary and Process Grain Elevators - Summarized by Railway Class

---

NOTES:

---

SOURCE: Canadian Grain Commission

- (1) The Canadian Grain Commission produces a listing of all elevators in western Canada as of the beginning of each crop year. These are updated as deemed necessary, but on an irregular basis, to reflect variations arising from the closure, transfer or addition of facilities as well as changes in licensed storage capacity. The information presented here reflects the most current available at the end of each quarter, and not necessarily that of a full accounting as of the date cited.
- (2) Railways are classed by the relative size of their commercial activities. Class 1 railways comprise the largest carriers, and include both Canadian National and Canadian Pacific. Class 2 and 3 carriers have a smaller commercial base and operations of a regional or shortline nature. Among these carriers are the British Columbia Railway, and the shortline holdings of RailAmerica and OmniTRAX.
- (3) Some primary and process elevator facilities are "not on track," and do not have direct physical access to the services of a local railway. This arises by way of either a conscious construction decision or the abandonment of the local railway line that previously provided service to the facility.

Western Canadian Primary and Process Grain Elevators - Summarized by Principal Grain Company

---

**NOTES:**

---

SOURCE: Canadian Grain Commission

- (1) The Canadian Grain Commission produces a listing of all elevators in western Canada as of the beginning of each crop year. These are updated as deemed necessary, but on an irregular basis, to reflect variations arising from the closure, transfer or addition of facilities as well as changes in licensed storage capacity. The information presented here reflects the most current available at the end of each quarter, and not necessarily that of a full accounting as of the date cited.
- (2) Effective 1 November 2008, the elevators previously listed separately for Agricore United and Saskatchewan Wheat Pool were combined. All associated data has been restated under the corporate name of Viterra Inc.

**Western Canadian Primary and Process Grain Elevators Capable of Multiple-Car Block Loading - Summarized by Province**

---

**NOTES:**

---

SOURCE: Canadian Grain Commission, individual grain companies, Canadian National Railway Company, and Canadian Pacific Railway Company

- (1) The Canadian Grain Commission produces a listing of all elevators in western Canada as of the beginning of each crop year. These are updated as deemed necessary, but on an irregular basis, to reflect variations arising from the closure, transfer or addition of facilities as well as changes in licensed storage capacity. The information presented here reflects the most current available at the end of each quarter, and not necessarily that of a full accounting as of the date cited.
- (2) The classes used here to group grain elevators are based on the number of railway car spots tied to each facility. These classes were intended to parallel the groupings used by CN and CP in their multiple-car block incentive loading programs, with only those facilities having 25 or more car spots being eligible. As such, those "not on track" or having less than 25 car spots (Class A facilities) are omitted from presentation here.
- (3) Changes instituted by both CN and CP to their respective incentive loading programs have resulted in the gradual withdrawal of the discounts applicable on smaller block movements. CN dispensed with all discounts on movements of 25-49 cars at the beginning of the 2003-04 crop year, while CP did so only three years later. At the commencement of the 2006-07 crop year, CP also increased the minimum threshold on these incentive movements to 56 cars. As a result of these changes, an elevator's classification can no longer be used to define its eligibility under these programs. The time series presented here depicts the evolution of the elevator network capable of moving grain in blocks of 25 or more cars rather than in their eligibility to receive these incentive discounts.

SOURCE: Canadian Grain Commission, individual grain companies, Canadian National Railway Company, and Canadian Pacific Railway Company

- (1) The Canadian Grain Commission produces a listing of all elevators in western Canada as of the beginning of each crop year. These are updated as deemed necessary, but on an irregular basis, to reflect variations arising from the closure, transfer or addition of facilities as well as changes in licensed storage capacity. The information presented here reflects the most current available at the end of each quarter, and not necessarily that of a full accounting as of the date cited.
- (2) Railways are classed by the relative size of their commercial activities. Class 1 railways comprise the largest carriers, and include both Canadian National and Canadian Pacific. Class 2 and 3 carriers have a smaller commercial base and operations of a regional or shortline nature. Among these carriers are the British Columbia Railway, and the shortline holdings of RailAmerica and OmniTRAX.
- (3) The classes used here to group grain elevators are based on the number of railway car spots tied to each facility. These classes were intended to parallel the groupings used by CN and CP in their multiple-car block incentive loading programs, with only those facilities having 25 or more car spots being eligible. As such, those "not on track" or having less than 25 car spots (Class A facilities) are omitted from presentation here.
- (4) Changes instituted by both CN and CP to their respective incentive loading programs have resulted in the gradual withdrawal of the discounts applicable on smaller block movements. CN dispensed with all discounts on movements of 25-49 cars at the beginning of the 2003-04 crop year, while CP did so only three years later. At the commencement of the 2006-07 crop year, CP also increased the minimum threshold on these incentive movements to 56 cars. As a result of these changes, an elevator's classification can no longer be used to define its eligibility under these programs. The time series presented here depicts the evolution of the elevator network capable of moving grain in blocks of 25 or more cars rather than in their eligibility to receive these incentive discounts.

**Western Canadian Primary and Process Grain Elevators Capable of Multiple-Car Block Loading - Summarized by Railway Line Classification**

---

**NOTES: NOTES:**

---

SOURCE: Canadian Grain Commission, individual grain companies, Canadian National Railway Company, and Canadian Pacific Railway Company

- (1) The Canadian Grain Commission produces a listing of all elevators in western Canada as of the beginning of each crop year. These are updated as deemed necessary, but on an irregular basis, to reflect variations arising from the closure, transfer or addition of facilities as well as changes in licensed storage capacity. The information presented here reflects the most current available at the end of each quarter, and not necessarily that of a full accounting as of the date cited.
- (2) The term "grain-dependent branch line" denotes a legal designation under the Canada Transportation Act. For comparative purposes only, the term has been affixed to those railway lines so designated under Schedule I of the Canada Transportation Act (1996) regardless of any subsequent change in ownership or legal designation.
- (3) The classes used here to group grain elevators are based on the number of railway car spots tied to each facility. These classes were intended to parallel the groupings used by CN and CP in their multiple-car block incentive loading programs, with only those facilities having 25 or more car spots being eligible. As such, those "not on track" or having less than 25 car spots (Class A facilities) are omitted from presentation here.
- (4) Changes instituted by both CN and CP to their respective incentive loading programs have resulted in the gradual withdrawal of the discounts applicable on smaller block movements. CN dispensed with all discounts on movements of 25-49 cars at the beginning of the 2003-04 crop year, while CP did so only three years later. At the commencement of the 2006-07 crop year, CP also increased the minimum threshold on these incentive movements to 56 cars. As a result of these changes, an elevator's classification can no longer be used to define its eligibility under these programs. The time series presented here depicts the evolution of the elevator network capable of moving grain in blocks of 25 or more cars rather than in their eligibility to receive these incentive discounts.

NOTES:

SOURCE: Canadian Grain Commission, individual grain companies, Canadian National Railway Company, and Canadian Pacific Railway Company

- (1) The Canadian Grain Commission produces a listing of all elevators in western Canada as of the beginning of each crop year. These are updated as deemed necessary, but on an irregular basis, to reflect variations arising from the closure, transfer or addition of facilities as well as changes in licensed storage capacity. The information presented here reflects the most current available at the end of each quarter, and not necessarily that of a full accounting as of the date cited.
- (2) Storage capacity denotes that recorded by the Canadian Grain Commission for each facility at the time of its opening. Any change in the associated storage capacity made subsequent to the opening of the facility is not reflected here.
- (3) The classes used here to group grain elevators are based on the number of railway car spots tied to each facility. These classes parallel the groupings initially used by CN and CP in their multiple-car block incentive loading programs. Although only those facilities having 25 or more car spots were initially deemed eligible for these programs, those having less than 25 car spots or "not on track" (Class A facilities) have also been included.

Western Canadian Primary and Process Grain Elevator Openings - Summarized by Railway Class

---

**NOTES:**

---

SOURCE: Canadian Grain Commission, individual grain companies, Canadian National Railway Company, and Canadian Pacific Railway Company

- (1) The Canadian Grain Commission produces a listing of all elevators in western Canada as of the beginning of each crop year. These are updated as deemed necessary, but on an irregular basis, to reflect variations arising from the closure, transfer or addition of facilities as well as changes in licensed storage capacity. The information presented here reflects the most current available at the end of each quarter, and not necessarily that of a full accounting as of the date cited.
- (2) Storage capacity denotes that recorded by the Canadian Grain Commission for each facility at the time of its opening. Any change in the associated storage capacity made subsequent to the opening of the facility is not reflected here.
- (3) Railways are classed by the relative size of their commercial activities. Class 1 railways comprise the largest carriers, and include both Canadian National and Canadian Pacific. Class 2 and 3 carriers have a smaller commercial base and operations of a regional or shortline nature. Among these carriers are the British Columbia Railway, and the shortline holdings of RailAmerica and OmniTRAX.
- (4) The classes used here to group grain elevators are based on the number of railway car spots tied to each facility. These classes parallel the groupings initially used by CN and CP in their multiple-car block incentive loading programs. Although only those facilities having 25 or more car spots were initially deemed eligible for these programs, those having less than 25 car spots or "not on track" (Class A facilities) have also been included.

Western Canadian Primary and Process Grain Elevator Openings - Summarized by Railway Line Classification

---

**NOTES:**

---

SOURCE: Canadian Grain Commission, individual grain companies, Canadian National Railway Company, and Canadian Pacific Railway Company

- (1) The Canadian Grain Commission produces a listing of all elevators in western Canada as of the beginning of each crop year. These are updated as deemed necessary, but on an irregular basis, to reflect variations arising from the closure, transfer or addition of facilities as well as changes in licensed storage capacity. The information presented here reflects the most current available at the end of each quarter, and not necessarily that of a full accounting as of the date cited.
- (2) Storage capacity denotes that recorded by the Canadian Grain Commission for each facility at the time of its opening. Any change in the associated storage capacity made subsequent to the opening of the facility is not reflected here.
- (3) The term "grain-dependent branch line" denotes a legal designation under the Canada Transportation Act. For comparative purposes only, the term has been affixed to those railway lines so designated under Schedule I of the Canada Transportation Act (1996) regardless of any subsequent change in ownership or legal designation.
- (4) The classes used here to group grain elevators are based on the number of railway car spots tied to each facility. These classes parallel the groupings initially used by CN and CP in their multiple-car block incentive loading programs. Although only those facilities having 25 or more car spots were initially deemed eligible for these programs, those having less than 25 car spots or "not on track" (Class A facilities) have also been included.

NOTES:

SOURCE: Canadian Grain Commission, individual grain companies, Canadian National Railway Company, and Canadian Pacific Railway Company

- (1) The Canadian Grain Commission produces a listing of all elevators in western Canada as of the beginning of each crop year. These are updated as deemed necessary, but on an irregular basis, to reflect variations arising from the closure, transfer or addition of facilities as well as changes in licensed storage capacity. The information presented here reflects the most current available at the end of each quarter, and not necessarily that of a full accounting as of the date cited.
- (2) Storage capacity denotes that recorded by the Canadian Grain Commission for each facility at the time of its opening. Any change in the associated storage capacity made subsequent to the opening of the facility is not reflected here.
- (3) The classes used here to group grain elevators are based on the number of railway car spots tied to each facility. These classes parallel the groupings initially used by CN and CP in their multiple-car block incentive loading programs. Although only those facilities having 25 or more car spots were initially deemed eligible for these programs, those having less than 25 car spots or "not on track" (Class A facilities) have also been included.

Western Canadian Primary and Process Grain Elevator Closures - Summarized by Railway Class

---

**NOTES:**

---

SOURCE: Canadian Grain Commission, individual grain companies, Canadian National Railway Company, and Canadian Pacific Railway Company

- (1) The Canadian Grain Commission produces a listing of all elevators in western Canada as of the beginning of each crop year. These are updated as deemed necessary, but on an irregular basis, to reflect variations arising from the closure, transfer or addition of facilities as well as changes in licensed storage capacity. The information presented here reflects the most current available at the end of each quarter, and not necessarily that of a full accounting as of the date cited.
- (2) Storage capacity denotes that recorded by the Canadian Grain Commission for each facility at the time of its opening. Any change in the associated storage capacity made subsequent to the opening of the facility is not reflected here.
- (3) Railways are classed by the relative size of their commercial activities. Class 1 railways comprise the largest carriers, and include both Canadian National and Canadian Pacific. Class 2 and 3 carriers have a smaller commercial base and operations of a regional or shortline nature. Among these carriers are the British Columbia Railway, and the shortline holdings of RailAmerica and OmniTRAX.
- (4) The classes used here to group grain elevators are based on the number of railway car spots tied to each facility. These classes parallel the groupings initially used by CN and CP in their multiple-car block incentive loading programs. Although only those facilities having 25 or more car spots were initially deemed eligible for these programs, those having less than 25 car spots or "not on track" (Class A facilities) have also been included.
- (5) In some cases, the abandonment of a local railway line precedes the closure of an elevator facility. When this occurs, the elevator is reclassified to indicate that it is on a "discontinued" line segment, and grouped with other facilities "not on track." Yet the facility continues to carry the elevator classification derived from the number of railway car spots last recorded for it. This results in the anomalous reporting of a "not on track" elevator having one or more car spots. The car spots tied to any "not on track" facility should be viewed as having been retired.

Western Canadian Primary and Process Grain Elevator Closures - Summarized by Railway Line Classification

Western Canadian Primary and Process Grain Elevator Closures - Summarized by Railway Line Classification

---

**NOTES:**

---

SOURCE: Canadian Grain Commission, individual grain companies, Canadian National Railway Company, and Canadian Pacific Railway Company

- (1) The Canadian Grain Commission produces a listing of all elevators in western Canada as of the beginning of each crop year. These are updated as deemed necessary, but on an irregular basis, to reflect variations arising from the closure, transfer or addition of facilities as well as changes in licensed storage capacity. The information presented here reflects the most current available at the end of each quarter, and not necessarily that of a full accounting as of the date cited.
- (2) Storage capacity denotes that recorded by the Canadian Grain Commission for each facility at the time of its opening. Any change in the associated storage capacity made subsequent to the opening of the facility is not reflected here.
- (3) The term "grain-dependent branch line" denotes a legal designation under the Canada Transportation Act. For comparative purposes only, the term has been affixed to those railway lines so designated under Schedule I of the Canada Transportation Act (1996) regardless of any subsequent change in ownership or legal designation.
- (4) The classes used here to group grain elevators are based on the number of railway car spots tied to each facility. These classes parallel the groupings initially used by CN and CP in their multiple-car block incentive loading programs. Although only those facilities having 25 or more car spots were initially deemed eligible for these programs, those having less than 25 car spots or "not on track" (Class A facilities) have also been included.
- (5) In some cases, the abandonment of a local railway line precedes the closure of an elevator facility. When this occurs, the elevator is reclassified to indicate that it is on a "discontinued" line segment, and grouped with other facilities "not on track." Yet the facility continues to carry the elevator classification derived from the number of railway car spots last recorded for it. This results in the anomalous reporting of a "not on track" elevator having one or more car spots. The car spots tied to any "not on track" facility should be viewed as having been retired.

Number of Locations Accounting for 80% of Producer Deliveries (1)

NOTES:

Source: Canadian Grain Commission, *Grain Deliveries at Prairie Points*

- (1) Includes total deliveries of principal grains (wheat, durum, oats, barley, rye, flaxseed and canola) at licensed primary elevators located at prairie shipping points.
- (2) Total of stations reporting deliveries during crop year.
- (3) Not all CGC listed station registered deliveries during each crop year.
- (4) Year over year variance refers to the reduction in the number of stations accounting for 80% of producer deliveries.

NOTES:

SOURCE: Canadian National Railway Company, Canadian Pacific Railway Company, British Columbia Railway Company, OmniTrax, Transport Canada, and the Canadian Transportation Agency

- (1) Includes all railway route-miles west of Armstrong and Thunder Bay, Ontario, except where such mileage is operated by a non-common carrier (i.e., Greater Winnipeg Water District, Alberta Prairie Excursions Railway, etc.). No provision is made for double tracked route segments, sidings, yard tracks or spurs except when specifically identified as a grain-dependent branch line under the Canada Transportation Act (1996).
- (2) The classes used here to group railways are based on industry convention: Class 1 carriers denote major railways such as CN and CP; Class 2 carriers denote regional railways such as BC Rail; and Class 3 carriers denote shortline railways operated by companies such as OmniTRAX and RailAmerica.
- (3) In order to track changes in the ownership and operation of grain-dependent branch lines (GDBL), GDBL are deemed to be those specifically identified as such in Schedule I of the Canada Transportation Act (1996) rather than the subsequently amended Canada Transportation Act (2000).
- (4) Also includes route-miles found within the Northwest Territories.

NOTES:

SOURCE: Canadian National Railway Company, Canadian Pacific Railway Company, and Hudson Bay Railway Company

- (1) Does not include railway grain traffic originating in western Canada and destined to either eastern Canada, the United States of America, or Mexico.
- (2) Comprises all railway grain traffic originating in western Canada and moving to a designated western Canadian port in accordance with the provisions of the Canada Transportation Act. The grain volumes depicted herein include movements made with covered hopper cars only.
- (3) The term "grain-dependent branch line" denotes a legal designation under the Canada Transportation Act. For comparative purposes only, the term has been affixed to those railway lines so designated under Schedule I of the Canada Transportation Act (1996) regardless of any subsequent change in ownership or legal designation.

NOTES:

SOURCE: Canadian National Railway Company, Canadian Pacific Railway Company, and Hudson Bay Railway Company

- The classes used here to group railways are based on industry convention: Class 1 carriers denote BNSF, CN and CP; Class 2 carriers denote regional railways such as BC Rail; and Class 3 carriers denote shortline operations such as those of OmniTRAX and RailAmerica.
- Includes all Class 3 railway route-miles in the provinces of Manitoba, Saskatchewan, and Alberta. No provision is made for double tracked route segments, sidings, yard tracks or spurs except when specifically identified as a grain-dependent branch line under the Canada Transportation Act (1996).
- The term "grain-dependent branch line" denotes a legal designation under the Canada Transportation Act. For comparative purposes only, the term has been affixed to those railway lines so designated under Schedule I of the Canada Transportation Act (1996) regardless of any subsequent change in ownership or legal designation.
- Also includes route-miles found within the Northwest Territories.
- Comprises all railway grain traffic originating on shortline railways in the provinces of Manitoba, Saskatchewan, and Alberta and moving to a designated western Canadian port in accordance with the provisions of the Canada Transportation Act. The grain volumes depicted herein include movements made with covered hopper cars only.

NOTES:

SOURCE: Canadian National Railway Company, Canadian Pacific Railway Company, and Hudson Bay Railway Company

- (1) Does not include railway grain traffic originating in western Canada and destined to either eastern Canada, the United States of America, or Mexico.
- (2) Comprises all railway grain traffic originating in western Canada and moving to a designated western Canadian port in accordance with the provisions of the Canada Transportation Act. The grain volumes depicted herein include movements made with covered hopper cars only.
- (3) The classes used here to group railways are based on industry convention: Class 1 carriers denote BNSF, CN and CP; Class 2 carriers denote regional railways such as BC Rail; and Class 3 carriers denote shortline operations such as those of OmniTRAX and RailAmerica.

## NOTES:

SOURCE: Canadian Grain Commission

- The Canadian Grain Commission produces a listing of all elevators in western Canada as of the beginning of each crop year. These are updated as deemed necessary, but on an irregular basis, to reflect variations arising from the closure, transfer or addition of facilities as well as changes in licensed storage capacity. The information presented here reflects the most current available at the end of each quarter, and not necessarily that of a full accounting as of the date cited.
- Some primary and process elevator facilities are "not on track," and do not have direct physical access to the services of a local railway. This arises by way of either a conscious construction decision or the abandonment of the local railway line that previously provided service to the facility. Such facilities are excluded from consideration here.
- The term "grain-dependent branch line" denotes a legal designation under the Canada Transportation Act. For comparative purposes only, the term has been affixed to those railway lines so designated under Schedule I of the Canada Transportation Act (1996) regardless of any subsequent change in ownership or legal designation.
- Railways are classed by the relative size of their commercial activities. Class 1 railways comprise the largest carriers, and include both Canadian National and Canadian Pacific. Class 2 and 3 carriers have a smaller commercial base and operations of a regional or shortline nature. Among these carriers are the British Columbia Railway, and the shortline holdings of OmniTRAX and RailAmerica.

## NOTES:

SOURCE: Canadian Grain Commission, individual grain companies, Canadian National Railway Company, and Canadian Pacific Railway Company

- (1) The Canadian Grain Commission produces a listing of all elevators in western Canada as of the beginning of each crop year. These are updated as deemed necessary, but on an irregular basis, to reflect variations arising from the closure, transfer or addition of facilities as well as changes in licensed storage capacity. The information presented here reflects the most current available at the end of each quarter, and not necessarily that of a full accounting as of the date cited.
- (2) The classes used here to group terminal grain elevators are based on the number of railway car spots tied to each facility, and is made for comparative purposes only.

Traffic Volume by Port (number of cars) (2) (3)

NOTES:

Source: Canadian Wheat Board

- (1) Crop years quarters defined as unloads during weeks 1-13, 14-26, 27-39, & 40-52 inclusive for 1999-2000, 2000-2001 and 2002-2003 to 2005-2006.  
 Crop year quarters for 2001-2002 defined as weeks 1-14, 15-27, 28-39, & 40-53 inclusive.  
 Crop year quarters for 2006-2007 defined as weeks 1-13, 14-27, 28-39, & 40-52 inclusive.  
 Crop year quarters for 2007-2008 defined as weeks 1-14, 15-27, 28-40, & 41-53 inclusive.
- (2) Includes covered hopper car unloads of wheat, durum, barley, canola, oats, peas, rye and flaxseed at licensed terminal elevators.
- (3) Classification by carrier is based on originating point.

NOTES:

Source: Canadian Wheat Board

- (1) 2000-2001 crop year was the first year for the operation of the general tendering for CWB shipments to port as provided for in a Memorandum of Understanding that came into force on August 1, 2000.
- (2) CWB tender calls are for varying sizes of car lots, using a standard estimate of 88 tonnes per car.

NOTES:

Source: Canadian Wheat Board

- (1) Tender bids were received from 18 companies during the Q1 2004-2005 crop year.
- (2) Bids received were for varying sizes of car lots, covering either a portion or all of the tonnage of the corresponding tender call.
- (3) As with tender calls, a standard estimate of 88 tonnes per car is used to compute the volume of bids.

## NOTES:

Source: Canadian Wheat Board

- (1) Includes tendered malting barley tonnage.
- (2) Tonnage shipped to fill tenders called (see measure 2A-1) during the crop year or applicable quarter(s).
- (3) Total volume of CWB grains moved to ports is provided by CWB in carlots, converted to tonnes using an estimate of 88 tonnes/car for wheat and durum, and 80 tonnes/car for barley.
- (4) During the first half of the 2002-03 crop year, an additional 624 awarded tenders were cancelled due to the labour dispute at Vancouver terminals.

## NOTES:

Source: Canadian Wheat Board

- (1) The above tenders were not awarded to the lowest bidder because the lowest bids included conditions (e.g., the entire bid or a minimum number of cars had to be accepted, or the bid was contingent on the acceptance of an accompanying bid) which could not always be accommodated. However, these conditions were accepted in situations in which they did not impede the awarding of tenders in accordance with the Agreement.
- (2) A number of additional low bids, which did not meet contract specification, were received, but not considered for awards.
- (3) Based on standard estimate of 88 tonnes per car.

NOTES:

Source: Canadian Wheat Board

- (1) Car blocks determined by same shipper, station, ship date and unload terminal.
- (2) Car blocks shipped on consecutive ship dates treated as a single block.
- (3) Data relating to the movement of non-tendered grain in conjunction with tendered grain as part of a multiple car block is unavailable. The estimates made here of cars moving in multiple car blocks should, therefore, be considered as a minimum.
- (4) Malting barley not included.

## NOTES:

Source: Canadian Wheat Board

- (1) Penalties are applied on a car lot basis.
- (2) Cars unloading under the specified grade or protein levels are each assessed a \$200.00 penalty.
- (3) Cars unloading with higher grade or protein than specified are assessed a penalty equal to the differential in grade or protein, based on the initial payment.
- (4) Measure not applicable to malting barley, which is administered FOB. No penalties are applied to car unloads.

- (1) Malting barley not included.
- (2) Determined by month during which cars unloaded.
- (3) July 2002 volume includes 15,963 tonnes unloaded in first half August, 2002.  
 July 2003 volume includes 54,934 tonnes unloaded in the 2003/04 crop year.  
 July 2004 volume includes 72,578 tonnes unloaded in the 2004/05 crop year.  
 July 2005 volume includes 244,880 tonnes unloaded in the 2005/06 crop year.  
 July 2006 volume includes 86,913 tonnes unloaded in the 2006/07 crop year.  
 July 2007 volume includes 20467 tonnes unloaded in the 2007/08 crop year.

**Western Canadian Railway Car Cycles - CWB Tendered & Non-Tendered, Summarized by Destination Corridor (1) (2)****NOTES:**

---

SOURCE: Canadian Wheat Board, Canadian National Railway Company and Canadian Pacific Railway Company

- (1) The car cycle information presented is drawn from data supplied by CN and CP to Transport Canada. Although the structures of these files differ significantly, it is the scope of the data itself that presents the greatest challenge in conducting a comprehensive examination. Specifically, there are two generic problems. The first of these relates to the incomplete nature of the data records themselves, and what is often a failure to include important "triggers" in calculating specific segments of individual car cycles. The second relates to the exclusion of that portion of time spent by individual cars on the lines of another carrier - be it for loading or unloading. These problems make it impossible to examine the cycles of all Western Canadian grain movements. For the purpose of consistency, only those cycles relating to local railway movements - where both the origin and destination are served by the same carrier - are considered here. This effectively precludes any consideration being given to the port of Churchill.
- (2) The distribution of individual car cycle times derived from useable cycle records is highly skewed. Measures such as the mean, and the standard deviation, reflect the heavy influence accorded the most extreme "outlying" data points (i.e., a maximum cycle of 1,114 days in the 1999-2000 crop year). The summary statistics presented here are for information purposes only.
- (3) In order to mitigate the influence accorded the most extreme "outlying" data points, records with cycles in excess of 90 days were excluded from consideration in the calculation of summary statistics for Western Canadian car cycles. The term "trimmed" (i.e., trimmed mean) is often used to differentiate the statistics arising from a culled data sample.
- (4) The statistics presented for average car cycles into Vancouver, Prince Rupert, and Thunder Bay are drawn from the Trimmed Cycle Sample, and not the more heavily skewed Initial Cycle Sample.
- (5) The use of Prince Rupert as an alternative port during the lockout of the Vancouver Grain Workers Union in the first quarter of the 2002-03 crop year provided substantially more useable data. Caution is advised in making any year-over-year comparisons using these statistics.

NOTES:

Source: Canadian Wheat Board

- (1) Bids are expressed as a discount to the CWB's initial payment in store at either Vancouver or the St. Lawrence
- (2) "Majors" refers to Viterro, Cargill Limited and Pioneer Grain Company, Limited, which are the three largest grain companies sourcing grain in Western Canada. These companies also own terminal facilities at both Thunder Bay and West Coast ports. "Balance" refers to all other grain companies bidding on CWB tenders.

- (1) Tended tonnage from CWB tendered unload file
- (2) Total CWB tonnage from CGC Unload Data Warehouse.
- (3) Non-Tendered tonnage is calculated (Total - Tended)
- (4) "Majors" refers to Agricore United, Saskatchewan Wheat Pool, Cargill Limited and Pioneer Grain Company, Limited, which are the four largest grain companies sourcing grain in Western Canada. These companies also own terminal facilities at both Thunder Bay and West Coast ports. "Balance" refers to all other grain companies bidding on CWB tenders.

Western Canadian Railway Car Cycles - CWB Advance Awards, Summarized by Destination Corridor (1) (2)

**NOTES:**

---

SOURCE: Canadian Wheat Board, Canadian National Railway Company and Canadian Pacific Railway Company

- (1) The car cycle information presented is drawn from data supplied by CN and CP to Transport Canada. Although the structures of these files differ significantly, it is the scope of the data itself that presents the greatest challenge in conducting a comprehensive examination. Specifically, there are two generic problems. The first of these relates to the incomplete nature of the data records themselves, and what is often a failure to include important "triggers" in calculating specific segments of individual car cycles. The second relates to the exclusion of that portion of time spent by individual cars on the lines of another carrier - be it for loading or unloading. These problems make it impossible to examine the cycles of all Western Canadian grain movements. For the purpose of consistency, only those cycles relating to local railway movements - where both the origin and destination are served by the same carrier - are considered here. This effectively precludes any consideration being given to the port of Churchill.
- (2) The distribution of individual car cycle times derived from useable cycle records is highly skewed. Measures such as the mean, and the standard deviation, reflect the heavy influence accorded the most extreme "outlying" data points (i.e., a maximum cycle of 1,114 days in the 1999-2000 crop year). The summary statistics presented here are for information purposes only.
- (3) In order to mitigate the influence accorded the most extreme "outlying" data points, records with cycles in excess of 90 days were excluded from consideration in the calculation of summary statistics for Western Canadian car cycles. The term "trimmed" (i.e., trimmed mean) is often used to differentiate the statistics arising from a culled data sample.
- (4) The statistics presented for average car cycles into Vancouver, Prince Rupert, and Thunder Bay are drawn from the Trimmed Cycle Sample, and not the more heavily skewed Initial Cycle Sample.

Distribution of Tendered and Advance Awards Grain by Size of Car Block (1) (2) (3)

NOTES:

Source: Canadian Wheat Board

- (1) Car blocks determined by same shipper, station, ship date and unload terminal.
- (2) Car blocks shipped on consecutive ship dates treated as a single block.
- (3) Data relating to the movement of non-tendered and non-advance awards grain as part of a multiple car block is unavailable. The estimates made here of cars moving in multiple car blocks should, therefore, be considered as a minimum.

## NOTES:

SOURCE: Agricore United and Saskatchewan Wheat Pool

- (1) Composite freight rates for short-haul trucking are drawn from rates published by Agricore United, and Saskatchewan Wheat Pool for their "in-house" trucking services. The programs offered by these companies - while similar in nature - have different mileage scales and rates that limit direct comparisons. The composite freight rates presented here represent a blending of these rate structures, and are intended to provide a general reflection of prevailing rate levels, and price movement over time.
- (2) The rates tied to the "in-house" trucking services of the companies surveyed apply equally within all western Canadian provinces where their facilities can be found. To this end, the rates depicted for western Canada mirror those for Manitoba, Saskatchewan, Alberta and British Columbia.

## NOTES:

Source: Canadian Grain Commission, *Grain Statistics Weekly*

- (1) Includes rail and truck shipments.  
(2) Canadian Grain Commission data for pea shipments replaced data for rye shipments as of the beginning of the 2002/03 crop year. Due to relatively small volumes of rye and pea shipments, no adjustments to totals have been made.

## NOTES:

Source: Canadian Grain Commission, *Grain Statistics Weekly*

- (1) Average days in store as determined from average inventory turnover ratio (total shipments divided by weekly stock level) divided by number of days in quarter and crop year to date.  
(2) Canadian Grain Commission data for pea stock and shipments replaced data for rye stock and shipments as of the beginning of the 2002/03 crop year.

## NOTES:

Source: Canadian Grain Commission, *Grain Statistics Weekly*

- (1) As determined by dividing weekly primary elevator stock levels by shipments, aggregated to determine an annual (or quarterly) average.  
(2) Canadian Grain Commission data for pea stock and shipments replaced data for rye stock and shipments as of the beginning of the 2002/03 crop year. Due to relatively small volumes of rye and peas, no adjustments to totals have been made.

NOTES:

Source: Canadian Grain Commission, *Summary - Licensed Primary Elevator Tariffs*

- (1) Posted tariffs represent the maximum that companies may charge.
- (2) Average charges on the basis of Accountable Gross Weight (AGW) = Gross weight less shrinkage for the 20 to 24 companies which posted tariffs on an AGW basis for the 1999-2000 to 2003-2004 crop years inclusive.
- (3) Average charges on the basis of Gross Weight (GW) for the 24 to 26 companies which posted tariffs on a GW basis for the 2004-2005 to 2007-2008 crop years.

NOTES:

Source: Canadian Grain Commission, *Summary - Licensed Primary Elevator Tariffs*

- (1) With respect to primary elevator receipts and interim elevator receipts, for each succeeding day or part thereof after the first ten days, excluding the day on which the storage period ends.
- (2) Posted tariffs represent the maximum that companies may charge.
- (3) Average charges on the basis of Accountable Gross Weight (AGW) = Gross weight less shrinkage for the 18 to 21 companies which posted tariffs on an AGW basis for the 1999-2000 to 2003-2004 crop years inclusive.
- (4) Average charges on the basis of Gross Weight (GW) for the 22 to 24 companies which posted tariffs on a GW basis for the 2004-2005 to 2007-2008 crop years.

NOTES:

SOURCE: Canadian National Railway Company, Canadian Pacific Railway Company, and Hudson Bay Railway Company

- (1) Does not include railway grain traffic originating in western Canada and destined to either eastern Canada, the United States of America, or Mexico.
- (2) Comprises all railway grain traffic originating in western Canada and moving to a designated western Canadian port in accordance with the provisions of the Canada Transportation Act. The grain volumes depicted herein include movements made with covered hopper cars only.

NOTES:

SOURCE: Canadian National Railway Company, Canadian Pacific Railway Company, and Hudson Bay Railway Company

- (1) Does not include railway grain traffic originating in western Canada and destined to either eastern Canada, the United States of America, or Mexico.
- (2) Comprises all railway grain traffic originating in western Canada and moving to a designated western Canadian port in accordance with the provisions of the Canada Transportation Act. The grain volumes depicted herein include movements made with covered hopper cars only.

NO NOTES:

SOURCE: Canadian National Railway Company, Canadian Pacific Railway Company, and Hudson Bay Railway Company

(1) Does not include railway grain traffic originating in western Canada and destined to either eastern Canada, the United States of America, or Mexico.

(2) Comprises all railway grain traffic originating in western Canada and moving to a designated western Canadian port in accordance with the provisions of the Canada Transportation Act. The grain volumes depicted herein include movements made with covered hopper cars only.

NOTES:

SOURCE: Canadian National Railway Company and Canadian Pacific Railway Company

- The car cycle information presented is drawn from data supplied by CN and CP to Transport Canada. Although the structures of these files differ significantly, it is the scope of the data itself that presents the greatest challenge in conducting a comprehensive examination. Specifically, there are two generic problems. The first of these relates to the incomplete nature of the data records themselves, and what is often a failure to include important "triggers" in calculating specific segments of individual car cycles. The second relates to the exclusion of that portion of time spent by individual cars on the lines of another carrier - be it for loading or unloading. These problems make it impossible to examine the cycles of all western Canadian grain movements. For the purpose of consistency, only those cycles relating to local railway movements - where both the origin and destination are served by the carrier - are considered here. This effectively precludes any consideration being given to the port of Churchill.
- The distribution of individual car cycle times derived from useable cycle records is highly skewed. Measures such as the mean, and the standard deviation, reflect the heavy influence accorded the most extreme "outlying" data points (i.e., a maximum cycle of 1,111 days in the 1999-2000 crop year). The summary statistics presented here are for information purposes only.
- In order to mitigate the influence accorded the most extreme "outlying" data points, records with cycles in excess of 90 days were excluded from consideration in the calculation of summary statistics for Western Canadian car cycles. The term "trimmed" (i.e., trimmed mean) is often used to differentiate the statistics arising from a culled data sample. For the 1999-2000 crop year, some 4,501 records (accounting for 2.9% of the overall observations) were excluded. For the 2000-01 crop year, 1,138 records (accounting for 0.9% of the overall observations) were excluded. For the 2001-02 crop year, 1,039 records (accounting for 1.1% of the overall observations) were excluded. For the 2002-03 crop year, 2,345 records (accounting for 3.1% of the overall observations) were excluded. For the 2003-04 crop year, 1,026 records (accounting for 0.9% of the overall observations) were excluded. For the 2004-05 crop year, 304 records (accounting for 0.2% of the overall observations) were excluded. For the 2005-06 crop year, 1,595 records (accounting for 0.9% of the overall observations) were excluded.
- The statistics presented for average car cycles into Vancouver, Prince Rupert, and Thunder Bay are drawn from the Trimmed Cycle Sample, and not the more heavily skewed Initial Cycle Sample.
- Owing to the lack of sufficient useable data, cycles relating to the movement of grain to the port of Prince Rupert during the 1999-2000, 2000-01, and 2001-02 crop years are based on a limited number of observations. The use of Prince Rupert since the 2002-03 crop year has provided substantially more useable data.

- (2) The distribution of individual car cycle times derived from useable cycle records is highly skewed. Measures such as the mean, and the standard deviation, reflect the heavy influence accorded the most extreme "outlying" data points. The statistics presented here are for information purposes only.
- (3) In order to mitigate the influence accorded the most extreme "outlying" data points, records with cycles in excess of 90 days were excluded from consideration in the calculation of statistics presented here. The term "trimmed" is often used to differentiate the statistics arising from a culled data sample.

NOTES:

SOURCE: Canadian National Railway Company and Canadian Pacific Railway Company

- (1) The car cycle information presented is drawn from data supplied by CN and CP to Transport Canada. Although the structures of these files differ significantly, it is the scope of the data itself that presents the greatest challenge in conducting a comprehensive examination. Specifically, there are two generic problems. The first of these relates to the incomplete nature of the data records themselves, and what is often a failure to include important "triggers" in calculating specific segments of individual car cycles. The second relates to the exclusion of that portion of time spent by individual cars on the lines of another carrier - be it for loading or unloading. These problems make it impossible to examine the cycles of all western Canadian grain movements. For the purpose of consistency, only those cycles relating to local railway movements - where both the origin and destination are served by the same carrier - are considered here. This effectively precludes any consideration being given to the port of Churchill.
- (2) The distribution of individual car cycle times derived from useable cycle records is highly skewed. Measures such as the mean, and the standard deviation, reflect the heavy influence accorded the most extreme "outlying" data points. The statistics presented here are for information purposes only.
- (3) In order to mitigate the influence accorded the most extreme "outlying" data points, records with cycles in excess of 90 days were excluded from consideration in the calculation of statistics presented here. The term "trimmed" is often used to differentiate the statistics arising from a culled data sample.

## NOTES:

SOURCE: Canadian National Railway Company and Canadian Pacific Railway Company

- (1) The information presented here is estimated based on data supplied by both CN and CP. Its assembly is intended to reflect the relative use of railway volume discounts in moving grain to western Canadian export positions over time.
- (2) Comprises all railway grain traffic originating in western Canada and moving to a designated western Canadian port in accordance with the provisions of the Canada Transportation Act. The grain volumes depicted herein include movements made with covered hopper cars only.
- (3) The multiple-car block incentive programs offered by CN and CP - while similar in nature - have structural differences arising from the maximum number of cars that each carrier can accommodate in a single shipment. The volumes depicted here are framed within the general structure of these programs.

NOTES:

SOURCE: Canadian National Railway Company and Canadian Pacific Railway Company

- (1) The information presented here is estimated based on data supplied by both CN and CP. Its assembly is intended to reflect the relative use of railway volume discounts in moving grain to western Canadian export positions over time.
- (2) Comprises all railway grain traffic originating in western Canada and moving to a designated western Canadian port in accordance with the provisions of the Canada Transportation Act. The grain volumes depicted herein include movements made with covered hopper cars only.
- (3) The multiple-car block incentive programs offered by CN and CP - while similar in nature - have structural differences arising from the maximum number of cars that each carrier can accommodate in a single shipment. The volumes depicted here are framed within the general structure of these programs.
- (4) The total value of the discounts paid by the railways is estimated using the discount rates applicable for the basic multiple-car block incentive programs of both CN and CP. Additional discounts, such as those earned for shuttle train movements are excluded owing to insufficient data detail. The estimate made here should, therefore, be considered as a minimum rather than as a maximum.

NOTES:

SOURCE: Canadian National Railway Company, Canadian Pacific Railway Company, and Hudson Bay Railway Company

- (1) The classes used here to group railways are based on industry convention: Class 1 carriers denote BNSF, CN and CP; Class 2 carriers denote regional railways such as BC Rail; and Class 3 carriers denote shortline operations such as those of OmniTRAX and RailAmerica.
- (2) Comprises all railway grain traffic originating in western Canada and moving to a designated western Canadian port in accordance with the provisions of the Canada Transportation Act. The grain volumes depicted herein include movements made with covered hopper cars only.
- (3) Includes all railway route-miles west of Armstrong and Thunder Bay, Ontario, except where such mileage is operated by a non-common carrier (i.e., Greater Winnipeg Water District, Alberta Prairie Excursions Railway, etc.). No provision is made for double tracked route segments, sidings, yard tracks or spurs except when specifically identified as a grain-dependent branch line under the Canada Transportation Act (1996).

## NOTES:

SOURCE: Canadian National Railway Company and Canadian Pacific Railway Company

- (1) The freight charges presented are composites drawn from all stations having continuously-published, single-car, tariff rates for the 1999-2000 through 2007-08 crop years, and are intended to provide a general reflection of prevailing rate levels, and price movement over time.
- (2) CP ceased to publish single-car rates for grain originating from points in British Columbia beginning with the 2007-08 crop year.
- (3) CP ceased to publish single-car rates for grain traffic destined to Prince Rupert in October 2000. Although CP has periodically published rates for multiple-car movements, these rates are not directly comparable, and are excluded from consideration here. In September 2002, CP re-established single-car rates from western Canadian origins (excepting those in British Columbia) to Prince Rupert. These, however, expired in March 2003.
- (4) CP did not publish single car rates on grain traffic destined to Churchill until September 2001. These rates, however, were never applicable to all CP origins. Rather, they were developed for selected origins, and were seasonal in nature. These characteristics make it difficult to properly depict rate levels, and price movement within the framework used here. As a result, these rates are excluded from consideration here.
- (5) CN ceased to publish single-car rates for grain traffic destined to Armstrong beginning with the 2007-08 crop year.
- (6) CP does not publish single car rates on grain traffic destined to Armstrong.

**Western Canadian Multiple-Car Shipment Incentives - Rail (dollars per tonne) (1)**

---

**NOTES:**

---

SOURCE: Canadian National Railway Company and Canadian Pacific Railway Company

- (1) Multiple-car block incentives are expressed as a discount from the single-car freight rates published in CN and CP tariffs.
- (2) The multiple-car block incentive programs offered by CN and CP - while similar in nature - have structural differences arising from the maximum number of cars that each carrier can accommodate in a single shipment. The structure depicted here is for comparison purposes only.
- (3) CN eliminated its discount for shipments in blocks of 25-49 cars at the beginning of the 2003-04 crop year.
- (4) At the beginning of the 2004-05 crop year CP widened the discounts applicable on shipments in blocks of 50-99 cars to include shipments made in blocks of 100-111 cars. For comparative purposes, the applicable CP discount on movements of 50-111 cars is reported using the previously defined car block sizes of 50-99 cars and 100+ cars.
- (5) No corresponding incentive exists under the CN program.
- (6) "Shuttle Service" programs were introduced during the second quarter of the 2000-01 crop year.
- (7) The discount premium paid by CN for shuttle train movements in the 2003-04 crop year has been converted to a per tonne value for comparative purposes.
- (8) The discount premium paid by CN for shuttle train movements was eliminated at the beginning of the 2004-05 crop year. As a result, eligible shuttle train movements receive the discount applicable on shipments in blocks of 100 cars.
- (9) Incentive discounts for CP movements to Prince Rupert were introduced during the first quarter of the 2002-03 crop year. These discounts were withdrawn in the third quarter when the single-car freight rates against which they applied were themselves allowed to expire in mid-March 2003.
- (10) No corresponding incentive exists under the CP program.
- (11) CP eliminated its "Shuttle Service" programs at the beginning of the 2004-05 crop year.

## NOTES:

Source: Canadian Grain Commission, *Grain Statistics Weekly*

- (1) Totals do not always add due to rounding.  
(2) Canadian Grain Commission data for pea stocks replaced data for rye stocks as of the beginning of the 2002/03 crop year. Due to relatively small volumes of rye and peas, no adjustments to totals have been made.

NOTES:

Source: Canadian Grain Commission, *Shipment Data Warehouse; Grain Statistics Weekly*

- (1) Average days in store as determined from average inventory turnover ratio, adjusted to reflect the operating seasons at Prince Rupert, Churchill and Thunder Bay.
- (2) Inventory turnover ratio is total shipments (from CGC Shipment Data Warehouse) divided by average weekly stock level (sum of weekly stock level reported in the CGC Grain Statistics Weekly, divided by number of weeks).
- (3) Not applicable due to high proportion of direct hit shipments.
- (4) Q1, 2002-03 crop year includes Vancouver operations to close of business August 25, 2002. Q2, 2002-03 crop year, for Vancouver Wharves and Neptune Terminals operations, average days in store not applicable.
- (5) During lockout at BCTEOA terminals, canola and pea shipments continued via direct hit facilities.

NOTES:

Source: Canadian Grain Commission, *Shipment Data Warehouse; Grain Statistics Weekly*

- (1) Shipments lagged one week from stock levels; i.e. ratio of stock in terminal position at end of week X (from Grain Statistics Weekly), to shipments (from Shipment Data Warehouse) during week X+1.
- (2) Weeks with ratios greater than 25 (due to extremely small shipment tonnage) have been removed from the average.
- (3) High proportion of direct hit shipments distorts weekly ratios.

NOTES:

Source: Canadian Grain Commission, *Shipment Data Warehouse; Grain Statistics Weekly*

- (1) Vancouver and Prince Rupert stock by grade available in aggregate only.
- (2) Shipments lagged one week from stock levels; i.e. ratio of stock in terminal position at end of week X (from Grain Statistics Weekly), to shipments (from Shipment Data Warehouse) during week X+1.
- (3) Weeks with ratios greater than 25 (due to extremely small shipment tonnage) have been removed from the average.
- (4) Blending of grades during loading of vessels, as is done to produce export grade "Western Canada Wheat", which is not a stored grade, may distort average ratios.

NOTES:

Source: Canadian Ports Clearance Association, *Daily Vessel Lineup*

- (1) Days waiting calculated from date vessel passed by Port Warden and Canadian Food Inspection Agency.
- (2) When vessel begins loading same day as inspection, 0 days waiting assessed.
- (3) One vessel excluded from Q1, 2002-03 due to loading at both Vancouver and Prince Rupert.  
Ruby Indah was delayed due to Grain Worker's lockout at Vancouver - in the two ports a total of 55 days.

NOTES:

Source: Canadian Ports Clearance Association, *Daily Vessel Lineup*

- (1) Days waiting calculated from date vessel passed by Port Warden and Canadian Food Inspection Agency.
- (2) When vessel begins loading same day as inspection, 0 days waiting assessed.
- (3) One vessel excluded from Q1, 2002-03 due to loading at both Vancouver and Prince Rupert.  
Ruby Indah was delayed due to Grain Worker's lockout at Vancouver - in the two ports a total of 55 days.

NOTES:

Source: Canadian Grain Commission, Summary - Licensed Terminal Elevator Tariffs

- (1) Charges are calculated on the total weight shipped.
- (2) Posted tariffs represent the maximum that companies may charge.
- (3) Terminal elevation charges paid by the party loading grain to vessel.
- (4) Two terminals at Vancouver posted separate rates for durum for 2000/2001 onward.
- (5) Vancouver average based on 5 terminals for 1999/2000 and 6 terminals for 2000/2001 onward.
- (6) Thunder Bay average based on 6 terminals for 1999/2000, 7 terminals for 2000/2001 and 2001/2002, 8 terminal for the balance for 2002/2003, and 7 terminals for 2003/2004 onward.

Average Handling Charges by Port Based on Posted Rates for each Terminal for Major Grains

NOTES:

Source: Canadian Grain Commission, Summary - Licensed Terminal Elevator Tariffs

- (1) For each day or part thereof.
- (2) Charges are calculated on the total weight shipped.
- (3) Posted tariffs represent the maximum that companies may charge.
- (4) Vancouver average based on 5 terminals for both 1999/2000 & 2000/2001, 3 terminals for 2001/2002 to 2006/2007, and 4 terminal for 2007/2008 onward.
- (5) Thunder Bay average based on 6 terminals for 1999/2000, 7 terminals for 2000/2001, 5 terminals for 2001/2002, 6 terminals for 2002/2003, 4 terminals for 2003/2004, 5 terminals for 2004/2005 to 2006/2007, and 6 terminals for 2007/2008 crop year to date.
- (6) Starting in 2001/2002, escalating storage charges have been posted by two terminals at Thunder Bay and by three West Coast terminals (including PRG). These terminals' rates have been excluded from the averages for Thunder Bay and Vancouver presented here. Without average days in store data for the particular terminals posting escalating tariffs, it is not possible to calculate an accurate rate for incorporation into the averages.
- (7) Escalating storage charges based on average days in store for 2001/2002 to 2006/2007 crop years.

Average Weekly Stock-to-Vessel Requirement Ratios for Major Grains at Vancouver and Thunder Bay (1)(2)

NOTES:

Source: Canadian Grain Commission, *Shipment Data Warehouse*; *Grain Statistics Weekly*; Canadian Ports Clearance Association, *Daily Vessel Lineup*

- (1) Vessel requirements lagged one week from stock levels; i.e. ratio of stock in terminal position at end of week X (from Grain Statistics Weekly) to requirements (due date from Daily Vessel Lineup matched to actual tonnage loaded from Shipment Data Warehouse) during week X+1.
- (2) Weeks with ratios greater than 25 (due to extremely small shipment tonnage) have been removed from the average.
- (3) High proportion of direct hit shipments distorts weekly ratios

NOTES:

Source: Canadian Grain Commission, *Shipment Data Warehouse; Grain Statistics Weekly*  
Canadian Ports Clearance Association, *Daily Vessel Lineup*

- (1) Vancouver and Prince Rupert stock by grade available in aggregate only.
- (2) Vessel requirements lagged one week from stock levels; i.e. ratio of stock in terminal position at end of week X (from Grain Statistics Weekly), to requirements (due date from Daily Vessel Lineup matched to actual tonnage loaded from Shipment Data Warehouse) during week X+1.
- (3) Weeks with ratios greater than 25 (due to extremely small shipment tonnage) have been removed from the average.
- (4) Blending of grades during loading of vessels, as is done to produce export grade "Western Canada Wheat", which is not a stored grade, may distort average ratios.
- (5) Pacific Seaboard ratios for Q1, 2002-03 crop year may be overstated due to inclusion of all stocks during lockout at Vancouver terminals.

## NOTES:

Source: Canadian Grain Commission, *Shipment Data Warehouse; Grain Statistics Weekly*

- (1) For purposes of identifying CWB and non-CWB grains, wheat, durum and barley ratios are attributed to the CWB. A small portion of wheat and barley shipments from Thunder Bay were non-Board feed, accounting for only 37,500 tonnes during the 1999/00 and 2000/01 crop years and 13,400 tonnes during the 2001/02 crop year.
- (2) Non-CWB grains included are canola, oats and flax.
- (3) See measure 3D-5 for detail by grain.
- (4) Shipments lagged one week from stock levels; i.e. ratio of stock in terminal position at end of week X (from Grain Statistics Weekly), to shipments (from Shipments Data Warehouse) during week X+1.
- (5) Insufficient data is available to present Vancouver ratios for first half 2002-03 due to the lockout at Vancouver terminals; Prince Rupert ratios provided as substitution.

## NOTES:

SOURCE: Canadian National Railway, Canadian Pacific Railway, Great Western Railway Ltd., Red Coat Road &amp; Rail Ltd. and Fife Lake Railway Ltd.

- (1) The classes used here to group railways are based on industry convention: Class 1 carriers denote CN and CP; Class 2 carriers denote regional railways such as BC Rail; and Class 3 carriers denote shortline operations such as those of OmniTRAX and RailAmerica.
- (2) The number of producer loading sites presented "as at" August 1, 1999 and July 31 of each crop year is approximated, and based on listings deemed to be in effect by CN for each of these points in time. CN's listing dated June 9, 1999 is used as a proxy for August 1, 1999; November 23, 2000 for July 31, 2000; October 26, 2001 for July 31, 2001; and April 29, 2002 for July 31, 2002.
- (3) The number of producer loading sites presented "as at" August 1, 1999 and July 31 of each crop year is approximated, and based on listings deemed to be in effect by CP for each of these points in time. Data pertaining to CP producer loading sites during the 1999-2000 crop year is unavailable, and has been estimated using alternative sources. CP's listing dated February 12, 2002 is used as a proxy for July 31, 2001; while that of June 27, 2002 is used as a proxy for July 31, 2002.
- (4) The number of CN and CP producer loading sites presented "as at" the end of each quarter of each crop year, is based on the most recent published listing by each carrier.
